

Chromebook How To's

Internet Connection Issues

Log into the chromebook using your school email account and password.

For proper internet connections, you must power on your chromebook while at school. If you take it home and use it, shut it down when you are done. When you come to school in the morning, power it on, while at school, and log in.

If you have trouble accessing web pages while using your chromebook it is a good idea to clear your internet history.

To access your history type ctrl+H. On the left menu select clear browsing data and then select, in the time range box, all time and clear data.
